

## maxMastermind disk space management

In a rapidly developing environment your iSeries resources will become increasingly tasked on a regular basis. As your customer base widens, or your stock levels increase, so will the strain on your system.

It is a time consuming task for skilled personnel to locate the areas of your organisation that are increasing this load. maxMastermind can help by providing detailed reports of your disk space usage, ensuring you can predict your future requirements as easily as possible. Users can also amend any system allocation accordingly, or you can let maxMastermind automatically adjust this for you. It will hold complete information about disk space, objects and libraries on your system making it easy and straightforward to find any information you require and at last give you some peace of mind.

### Business Benefits

Using the Disk Management features of maxMastermind you can drastically reduce the time taken to manage your objects and libraries. There are a large number of features that will aid with every stage of Disk Management. maxMastermind provides information that will automatically manage your file sizes and deleted records, list objects that have been missed by your normal back up routines, include functions to locate redundant and un-used objects and even locate any objects across your network of iSeries machines.

There are also a large number of pre-defined reports that can be produced for auditing and information purposes, e.g. multi machine library comparison report

and save file space occupancy. maxMastermind stores complete object level history therefore reducing the time and cost of computer audits. You can also verify that your change control procedures are being adhered to by using maxMastermind's high-level automatic inquiries and reports. As well as this you can check and fully configure any/all object authorisations to ensure your system is secure.

Management of your valuable resources is one of the essential responsibilities of all IT departments. With all the tools shipped with maxMastermind you can avoid any unnecessary purchase of extra disk space or larger AS/400s. You can also improve human resource management by making sure that your skilled personnel are available to carry out other essential tasks.

## Technical Benefits

With maxMastermind you can automatically find and recover deleted record space and reduce program size by up to 70% by removing program observability. Recover disk space by monitoring the size of system history files at the touch of a button.

### Additionally:

- maxMastermind can remove the need to manually monitor disk space dedicated to unprinted reports, easily find redundant objects by last used date and automatically mark and off-line shared folders and documents.
- You can find un-referenced objects quickly with the maxMastermind cross-referencing information. You can also retain the information required to pass internal or external audits.
- With maxMastermind you can ensure that you have the level of documented evidence to ensure that your backup procedures are not missing anything, giving you the confidence you require in a recovery situation.
- Using maxMastermind you can check and change any object authorities or authorisation lists giving you full control of your objects, within one easy to use software package.
- If change control procedures need to be verified, maxMastermind will assist by using automatic pre-defined inquiries and reports. This will ensure that system standards are being maintained.

- maxMastermind will ensure that your programs source can be reproduced utilising the excellent source management features, which increase the level of management information with maxMastermind's unused source code report.
- maxMastermind has a graphical presentation module, which is the easiest way to interpret the countless facts inherently required for good disk management. Multiple graphs can be created over multiple systems for inclusion in management reports/analysis.

## Specifications

- Runs on any version of IBM OS/400
- Available in CISC or RISC versions
- Automatic Analysis of disk usage
- Automatic physical file capacity management
- Automatic object compression
- Automatic mark and off-line folders and documents
- Accurately predict future disk requirements
- Highlight areas of unexpected growth or shrinkage
- Full control of object authorities
- Full Integration with all other Maximise modules and your existing environment, both inbuilt and through shipped OS/400 commands.
